IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1 (currently amended): A method for producing a photoresist master for an optical information medium comprising the steps of:

forming a light absorbing layer comprising a co-initiator on a substrate;

applying a photoresist layer on a substrate said light absorbing layer[[,]];

exposing the photoresist layer to a laser beam to form a latent image in the photoresist

layer[[,]]; and

developing the latent image to form a protrusion/depression pattern to thereby produce the photoresist master[[;]],

wherein [[a]] the light absorbing layer is formed between said substrate and said photoresist layer and in contact with said photoresist layer, and said light absorbing layer exhibits absorbs light absorption at the wavelength of said laser beam during said exposing step.

Claim 2 (original): The method according to claim 1 wherein said light absorbing layer contains an organic compound which exhibits light absorption at the wavelength of said laser beam.

Claim 3 (canceled)

Claim 4 (original): The method according to claim 1 wherein the relation:

 $tR / \lambda E \le 0.6$

2

is satisfied when said laser beam has a wavelength of λE (unit: nm), and said photoresist layer has a thickness of tR (unit: nm).

Claim 5 (original): The method according to claim 1 wherein the relation:

WP / $\lambda E \le 0.9$

is satisfied when said laser beam has a wavelength of λE (unit: nm), and said protrusion/depression pattern formed in the photoresist layer has a minimum width of WP (unit: nm).

Claim 6 (original): A method for producing a stamper for an optical information medium by using the photoresist master for an optical information medium produced by the method of claim 1, wherein said method comprises the step of transcribing said protrusion/depression pattern formed in the photoresist layer to a metal film.

Claim 7 (currently amended): The method according to claim 6 comprising the steps of:

forming a nickel thin film on said protrusion/depression pattern formed in the photoresist layer by electroless plating[[,]];

forming an electroformed film on said nickel thin film[[,]]; and peeling said metal film comprising said nickel thin film and said electroformed film to

thereby produce the metal film having the protrusion/depression pattern transcribed thereto.

Claim 8 (new): The method according to claim 1, wherein said light absorbing layer further comprises a dye.

Application No. 10/083,596 Reply to Office Action of October 23, 2003

Claim 9 (new): The method according to claim 1, wherein said light absorbing layer further comprises a photoinitiator.

Claim 10 (new): The method according to claim 1, wherein said light absorbing layer further comprises a photoinitiator and a dye.
